Contents

1 Git

1.1 Installation

1.2 Setting up credentials

This way you don't have to enter your username and password every time you want to push to for example *Github*.

Install and compile the Gnome Keyring devel:

```
sudo apt-get install libgnome-keyring-dev
sudo make --directory=/usr/share/doc/git/contrib/credential/gnome-keyring
```

And setup the credential:

```
git config --global credential.helper /usr/share/doc/git/contrib/credential/
gnome-keyring/git-credential-gnome-keyring
```
